

Creating Digital Trust & Detecting Risk

Alessandro de Cesero
Partner Sales Manager

January 2024

A person is holding a large, white sign with the words "RISKS" and "OPS" written in bold, black, sans-serif capital letters. The sign is held up against a background of a sunset or sunrise over a field, with the sun low on the horizon, creating a warm, golden glow. The person's hands are visible at the top and bottom of the sign, and they are wearing a dark-colored shirt. The overall scene conveys a sense of caution and awareness in a natural setting.

Agenda

- Updates on the Fraud & Risk Landscape
- What is Digital Trust Data
- How Digital Trust Improves Fraud & Risk Decisions Throughout the User Lifecycle
- Key Takeaways

Key Challenges

1. How to make the customer and their data central to fraud decisions?

2. How do banks handle regulatory changes & new emerging threats such as Gen-AI?

3. How do banks explore new capabilities but also maximise the use of current tech?

Customer Centricity

Data Is Pivotal For The Best Risk Management Practices

Real-time Payments

e.g., web, mobile

Reference Customer Data

e.g., customer, age, tenure

Non-Monetary Events

e.g., login attempts, pwd resets, profile changes

Card Transactions

e.g., PoS, CNP, 3DS connectivity

Digital Enrichment

e.g. device & behaviour

Shared Intra-bank Data

e.g., industry threat intel

Customer Centricity

Proactive Risk Management

Digital Trust

Behavioral Biometrics

Analyze keystrokes, mouse movements, gestures, and more to understand how each user interacts with your banking application.

Device Intelligence

Capture data about the device being used, such as the device model, operating system, screen resolution and more to identify anomalies.

Malware Patterns

Detect and block known and zero day malware, like remote access trojans, as well as bot patterns.

Location Analysis

Use multiple location points to create location anomaly and location spoofing detection opportunities.

Fully Channel Supported

Collect thousands of data parameters to establish a user's Digital footprint via JS for web banking and an SDK for mobile banking apps.

The screenshot displays a 'Digital Activity Event' interface. At the top, it indicates 'First Seen in Last 24 Hours'. The main content is divided into two sections: 'Device' and 'IP'. A red 'Declined' button is visible in the top right corner of the device section.

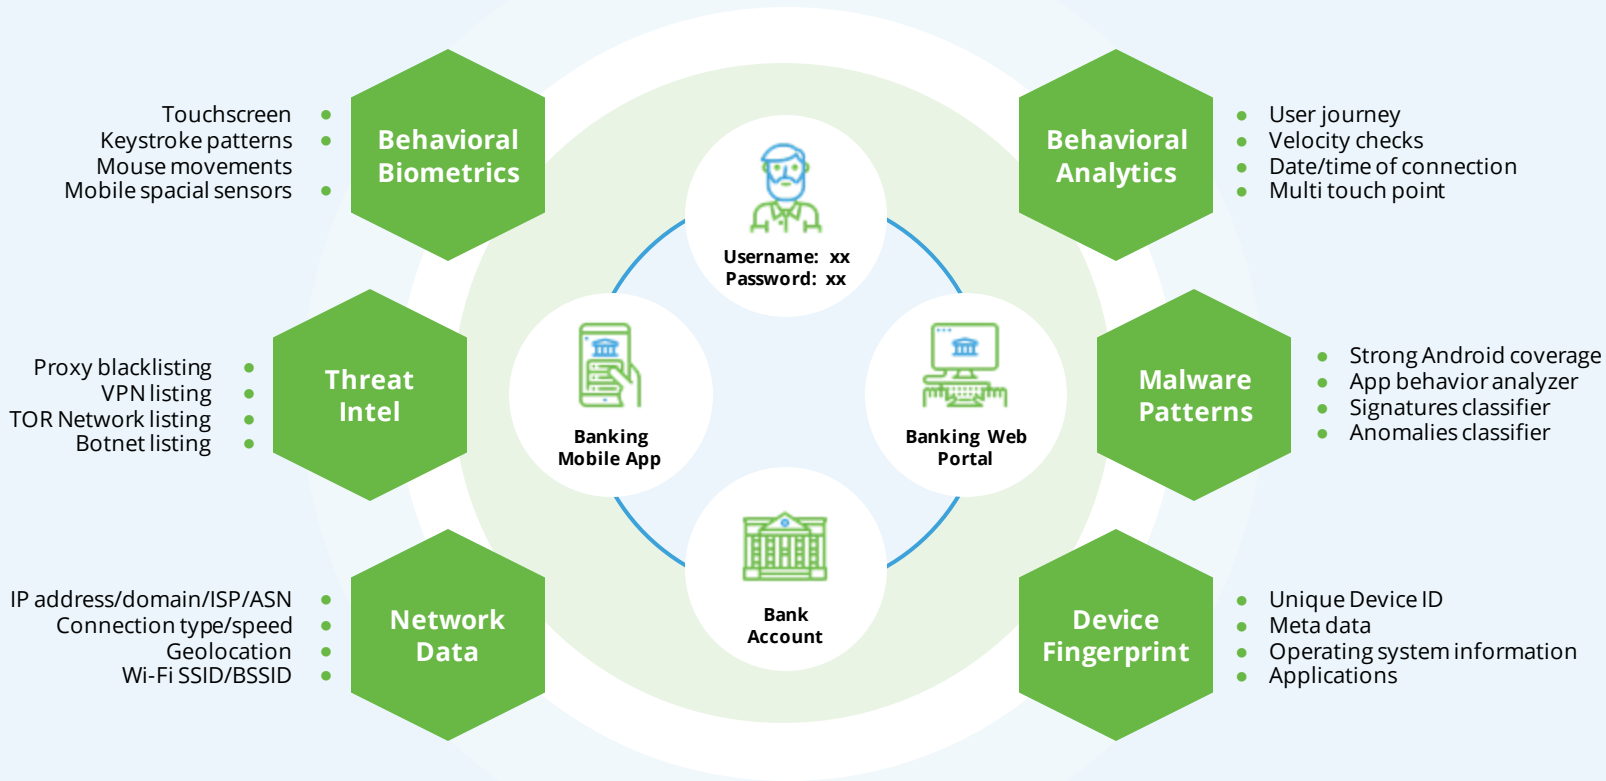

Device		IP	
Device ID	6a340affb04e4c3a97754828d6c6	IP Address	21.188.132.74
Unique Device ID	6a340affb04e4	IP Location	London, GBR
Device Channel	Mobile App (v3)	Proxy IP	True (11.111.111.11)
Model & Brand	Google Pixel 3	IP First Seen	05/04/2016 10:54:53 AM

Below the device information, the 'Session Activity' section shows a list of events:

- 05/04/2016 10:54:53 AM - Credentials Update (Past)
- 05/04/2016 10:54:53 AM - Login (First Seen Device)

Increased Data = Increased Opportunity Prevent AND Detect Fraud

Create a 360 View of Digital Risk

Go From Prevention to Detection

Maximise Opportunity Across The Full Risk Lifecycle

Results Speak For Themselves

Build Trust, Reduce Risk

Lower Friction Levels & Reduce Customer Inconvenience

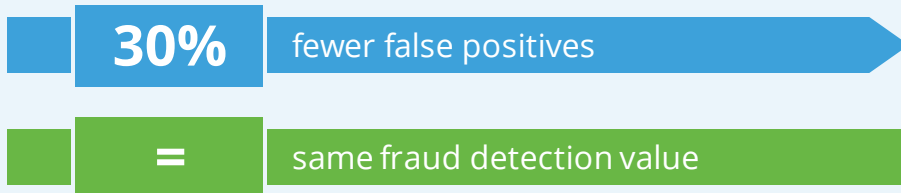

- Aggregate enriched data into one place for best results
- Establish trust for a high % of the user base

Transaction Decisions Only

Transactions with Digital Trust Enrichers

Customer Story

RBI boosts fraud detection by 37% with Feedzai Digital Trust

Raiffeisen Bank International

Problem

- Initial rollout was of Feedzai Transaction Fraud for Banking to comply with PSD2 regulations.
- Subsequent need to provide a better customer experience by preventing fraud earlier.
- Needed a centralized approach for all subsidiaries, enriching payment data with device and behavior data points.
- Keep maintenance costs low with easy-to-tune thresholds, and a friendly interface.

Solution

- Feedzai's Digital Trust complemented payment information in real-time with network intelligence and behavioral biometrics for a more comprehensive view of client behavior.
- Digital Trust hybrid AI brought efficiency when compared to rules-only systems.
- On top of TFB, Digital Trust further boosted fraud detection by 37% for subsidiary banks.

"The products we are combining and delivering to our subsidiary banks are reflected in the fraud numbers and what they are actually detecting."

Product Owner of RBI Group Fraud Transaction Monitoring

Key Takeaways

1. Complete the full customer risk and trust view with enriched digital signals

2. Leverage digital signals not at a single point in time, but throughout the lifecycle

3. Increase the opportunity to detect multiple fraud types with the same data points
